

Build a computer network

Instructions

1. Cut out the different items below – one complete set per pair or group of students
2. Each pair or group works together using the cut out images to assemble a bus network
3. Each pair or group should then check the layout created by another pair and discuss anything they think is incorrect.
4. After checking that it is correct, each pair then creates a ring network and again swaps with another pair to check their layout
5. After checking that it is correct, each pair then creates a star network and again swaps with another pair to check their layout
