## How the internet works

Link the correct layer with its description.

1) Network Access layer

2) Internet layer

3) Transport layer

4) Application layer

... is where a program prepares the data to be sent and prepares the network connections ect.

... is when the computer begins to disassemble the files into "packets" ready to be sent.

... is the actual transfer of the file through cyber-space.

... is where the file gains access to the receiving computer.
